

mise à jour de mapthis from Deniska.

Soumis par ciccio2a
31-03-2007

pour tous les possesseurs du GPS pour psp, Deniska vient de mettre à jour son soft.

telecharger
ici.

Voici ce que nous dit l'auteur sur la mise à jour

- changed hdop display logic
- changed thread priorities and stack allocations
- added CPU clock control to GPS-INFO screen [UP]/[DOWN] - valid settings are 333/222/111
111Mhz could help PSP-290 users to get faster fix since PSP may make less EMP noise at lesser frequencies.
- added initlocation switch to PSP-290 GPS INFO screen [left]/[right]
- misc fixes

To install, overwrite you current (0.4xxx) version's EBOOT.PBP with aproiate EBOOT version and replace the system folder with the new one.
